

ABSTRACT OF THE DISCLOSURE

Washer equipment jets washings to each sweeping area of driver's side and passenger's side windshield of a vehicle, which are swept by driver's side and passenger's side wiper blades, respectively, in such a manner that they synchronize together and move to a same direction. The washer equipment includes a primary jet part and a secondary jet part. The primary jet part splashes the washings down to a first splashdown disposed in each sweeping area of the driver's side and passenger's side wiper blades. The secondary jet part splashes the washings down to a second splashdown disposed upper side of the sweeping area of the driver's side wiper blade and disposed outside an upper reverse position of the passenger's side wiper blade.
